BR Series INSTRUCTION MANUAL

TCD210057AC

Autonics

Thank you for choosing our Autonics product.

Read and understand the instruction manual and manual thoroughly before using the product.

For your safety, read and follow the below safety considerations before using. For your safety, read and follow the considerations written in the instruction manual, other manuals and Autonics website.

Keep this instruction manual in a place where you can find easily.

The specifications, dimensions, etc. are subject to change without notice for product improvement. Some models may be discontinued without notice. Follow Autonics website for the latest information.

Safety Considerations

Observe all 'Safety Considerations' for safe and proper operation to avoid hazards.

 \cdot Δ symbol indicates caution due to special circumstances in which hazards may occur.

Warning Failure to follow instructions may result in serious injury or death.

- 01. Fail-safe device must be installed when using the unit with machinery that may cause serious injury or substantial economic loss. (e.g., nuclear power control, medical equipment, ships, vehicles, railways, aircraft, combustion apparatus, safety equipment, crime/disaster prevention devices, etc.) Failure to follow this instruction may result in personal injury, economic loss or fire.
- 02. Do not use the unit in the place where flammable/explosive/corrosive gas, high humidity, direct sunlight, radiant heat, vibration, impact or salinity may be present.

Failure to follow this instruction may result in explosion or fire.

03. Do not disassemble or modify the unit. Failure to follow this instruction may result in fire.

04. Do not connect, repair, or inspect the unit while connected to a power source.

Failure to follow this instruction may result in fire. **05. Check 'Connections' before wiring.**

Failure to follow this instruction may result in fire.

Caution Failure to follow instructions may result in injury or product damage.

01. Use the unit within the rated specifications.

Failure to follow this instruction may result in fire or product damage.**02. Use a dry cloth to clean the unit, and do not use water or organic solvent.** Failure to follow this instruction may result in fire.

Cautions during Use

Follow instructions in 'Cautions during Use'. Otherwise, It may cause unexpected accidents.

 When connecting an inductive load such as DC relay or solenoid valve to the output, remove surge by using diodes or varistors.

• Use the product after 0.5 sec of the power input.

When using a separate power supply for the sensor and load, supply power to the sensor first.

- 12-24 VDC power supply should be insulated and limited voltage/current or Class 2, SELV power supply device.
- Wire as short as possible and keep it away from high voltage lines or power lines to prevent surge and inductive noise.
- When using switching mode power supply (SMPS), ground F.G. terminal and connect a condenser between 0V and F.G. terminal to remove noise.
- When using a sensor with a noise-generating equipment (e.g., switching regulator, inverter, and servo motor), ground F.G. terminal of the equipment.
- This unit may be used in the following environments.
- Indoors (in the environment condition rated in 'Specifications')
- Altitude max. 2,000 m
- Pollution degree 2
- Installation category II

Cautions during Installation

- Be sure to install this product by following the usage environment, location, and specified ratings. Consider the listed conditions below.
- Installation environment and background (reflected light)
- Sensing distance and sensing target
- Direction of target's movement
- Feature data
- When installing multiple sensors closely, it may result in malfunction due to mutual interference.
- For installation, tighten the screw with a torque of 14.7 N m (metal material model), 0.39 N m (plastic material model). In case of the connector type, tightening torque for connector is from 0.39 to 0.49 N m.
- Do not impact with a hard object or bend the cable excessively. That could decrease the product's water resistance.
- Use this product after the test. Check whether the indicator works appropriately for the positions of the detectable object.

Reflective

Sensor - Sensing target: Install to face each other (parallel with the sensing side of the unit)

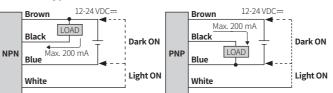

Operation Timing Chart

Operation mode	Light ON	Dark ON
Received light	Received Interrupted	Received
Operation indicator (red)	ON OFF	ON OFF
Transistor output		

 For preventing the malfunction, the transistor output maintains OFF state for 5 sec after power-on.

Connections

Cable type

Connector type

Pin	Color	Function
1	Brown	+V
2	White	CONTROL
3	Blue	0 V
4	Black	OUT

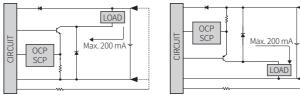

Operation mode selection

▲ Be sure to connect the control wire when selecting the operation mode Failure to this instruction may result in product damage.

Operation mode	Wiring
Dark ON	Connect the control wire (white) to +V (brown)
Light ON	Connect the control wire (white) to 0 V (blue)

Circuit

NPN open collector output PNP open collector output

 OCP (over current protection), SCP (short circuit protection)
 If short-circuit the control output terminal or supply current over the rated specification, normal control signal is not output due to the protection circuit.

Sensitivity Adjustment

- Set the adjuster for stable Light ON area, minimizing the effect of the installation
 environment
- Use the offered adjustment screwdriver. Do NOT turn with excessive force to prevent product damage.

The steps below are based on Light ON mode

Specifications

Model	BR 200-DDTN		
Sensing type	Narrow beam reflective		
Sensing distance	200 mm ⁰¹⁾		
Sensing target	Opaque materials, translucent materials		
Hysteresis	\leq 20 % of sensing distance		
Response time	≤1ms		
Light source	Infrared		
Peak emission wavelength	850 nm		
Sensitivity adjustment	YES (Adjuster)		
Operation mode	Light ON mode - Dark ON mode selectable (Control wire)		
Indicator	Operation indicator (red)		
Approval	CEER
